Symptom

The milk is not frothed enough in Syntia Cappuccino

Cure

INFO:
The milk is not frothed enough in Syntia Cappuccino

CURE:
Remove and open the Cappuccinatore rinse under running water.

remove any milk residues from the internal gasket.

The carafe coupling should not be covered with milk residues. Clean it with an abrasive damp cloth.

Please remind to the customer to do the clean function every time of dispensing milk beverage / beverages and It is also recommended to rinse the jug regularly with water and periodically with Saeco Cleaning Powder that cleans up all the milk ducts leading to improved results in the milk products.
