

Service information

Reference no.: SDA_90839

Symptom

Indication ventilate no waterflow noisy pump.

Cure

INFO:

After a longer period where the machine was not used the pump might get dry and will not deliver water and the pump starts to get noisy (metallic noise).

CURE:

In this case water has to be forced into the pump in order to ventilate the pump.

After this procedure the pump should work properly. There are different pumps for different applications (see image 1) and these are the codes:

- 1 - this pump is obtained by cutting the pump 2 or 3 + silicone tube 6x8
- 2 - 996530016912 (saeco code 147700100) to use as image 2.
- 3 - 996530016913 (saeco code 147700200) to use as image 3.
