Symptom

Water is dripping from shaver after it was cleaned under the tap-is this dangerous? Is something wrong with the shaver?

Cure

INFO:

Water is dripping from shaver after it was cleaned under the tap - is this dangerous? Is something wrong with the shaver?

CURE:

This is not a defect in the product. Due to the design of the PowerTouch and AquaTouch, the water does not get out quickly, so it might slowly 'leak' out the shaver.
The power system of the adapter changes the high voltage of the power outlet to low voltage of the shaver so there really is no danger at all!!!
