

Service information

Reference no.: SDA_92093

Symptom

Water leakage

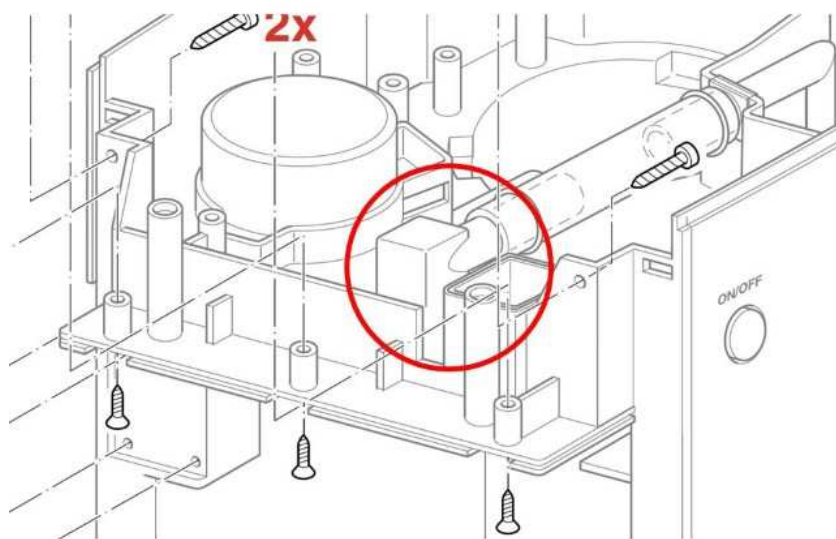

Cure

INFO:

From field quality analysis we have observed leakages in the appliance which can be solved, preventing Non Standard Exchanges.

CURE:

Remove the top cover from the appliance, underneath you can see the "shower head" which sprays the hot water into the coffee-filter.

...y seal the steam vent joint between the appliances frame and top cover, next to the shower head.) When you discover that the screws have been overturned / overtightened, it may help to fit slightly larger screws. It has been the case that the screw torque was not always well under control in the production line.

(Tip: exchange the overturned screw by a screw from the base plate (under the rubber feet), this screw is slightly longer, the screw from the showerhead also fits in the base plate.)

REMARKS:

- 26-03-2012: Initial version
- 28-11-2012: Screws from the base plate are a suitable replacement for the overturned showerhead screw.
