

**Service information**

**Reference no.: SDA\_94505**

**Symptom**

Usage of Anti-bacterial detergents in FC7070 AquaTrio

**Cure**

**INFO:**

From field complaints we have seen that the AquaTrio FC7070 appliance can have a hard time coping with Anti-bacterial detergents. The appliance does function and cleans well, but prolonged exposure to this type of detergent can have a negative effect on the pump (4322 006 96191) of the appliance. Symptoms that may be observed are brushes that do rotate but do not get wet (pump stalls).

**CURE:**

Replace the pump, and advise the consumer to flush the appliance according to the instructions in the DFU after every use! This is a vital step when using Anti-bacterial detergents.
