Service information

Symptom

NEW SW FOR ENERGICA FOCUS

Cure

INFO:
New software with changed hardware configuration in standby mode, with new error codes dedicated to the overheating.

CURE:
Upload the new software V.02.03.01
In Detail:
• Changed hardware configuration in standby mode to avoid the undesiderable activation of AC loads.
• Added two software thermostats to give no power to coffee boiler and steam boiler when its boiler temperature reach respectively 140°C and 160°C.
• Added two new error codes E20 and E21 to indicate respectively the overheating of coffee boiler (T>=150°C) and the overheating of steam boiler (T>= 170°C) and improved its storing with an hysteresis of 5°C. The older error code E14 and E15 represent only a timeout to reach the temperature target.
