PRODUCT INFORMATION

- This product meets the requirements regarding interference suppression on radio and TV.
- After the product has been repaired, it should function properly and has to meet the safety requirements as officially laid down at this moment.
- · All removable parts are dishwasher proof.

Electrical diagram:

DISASSEMBLY- AND RE-ASSEMBLY ADVISE

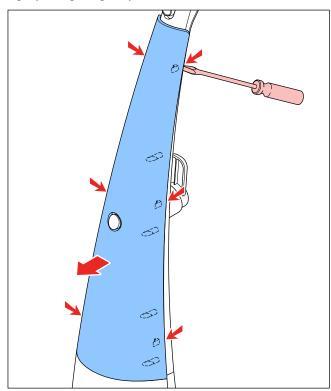

The system consists of three major parts:

- Upper Stick
- Lower Stick
- Nozzle

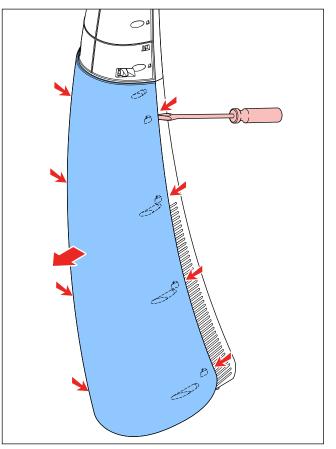

Upper / Lower stick

Remove the decorative front covers of both the Upper Stick and Lower stick.

To prevent scratches or damage it is advisable to detach the decorative covers and store them aside. To remove the decorative cover of the upper stick, take a small flat-head screwdriver and unlock the six snaps as indicated in the illustration below. Carefully move the panel forward, there are eight pillars guiding the panel on the frame behind.

To remove the decorative cover of the lower stick, take a small flat-head screwdriver and unlock the eight snaps as indicated in the illustration below. Carefully move the panel forward, there are eight pillars guiding the panel on the frame behind.

DISASSEMBLY- AND RE-ASSEMBLY ADVISE

FC7070/01 /11 /61 /81

Remove the complete stick from the nozzle.

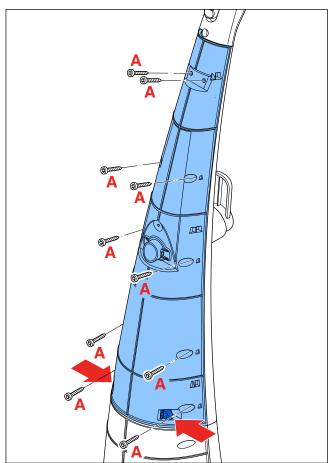

To be able to open the Upper Stick assy and Lower Stick assy the stick needs to be removed from the Nozzle, to do so unscrew the screw **K** holding the Clamp in place. Carefully open the Clamp and separate the Stick from the Nozzle. Please notice to orientation of the several connectors inside the joint. Within the joint are two electrical connections and two water connections present. Especially the electrical and small clean water connectors are fragile, considering the weight of the stick, please handle them with care during reinstallation.

At this point, also remove the Joint housing from the lower stick by unscrewing the four screws \mathbf{F} .

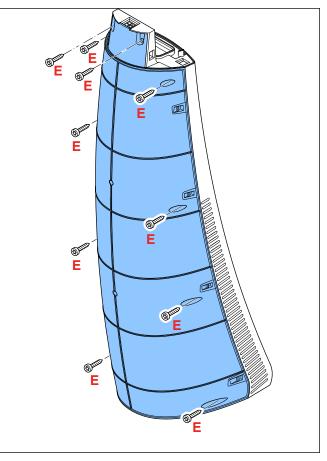

Open the Upper Stick assy and Lower Stick assy.

When a new appliance arrives at the consumer, the Upper Stick assy is separated from the Lower Stick assy. The consumer connects the Upper Stick assy to the Lower Stick assy, this is a one-time only connection and cannot be undone by the consumer. Service can disconnect these parts again.

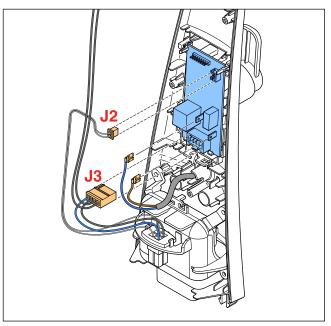

First remove the ten screws A from the Front Housing and operate the two white clamps securing the internal electrical connection from the Upper Stick assy to the Lower Stick assy. You can now remove the Front Housing panel and access the internal components

Secondly remove the ten screws \mathbf{E} from the Front Frame and remove the Front Frame from the Lower Stick assy. You can now access all internal components.

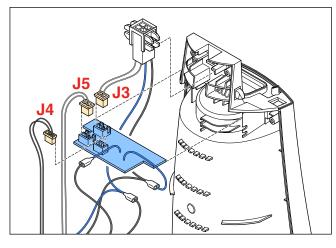

To exchange the PCBA in the Upper Stick assy, simply unlock the Positive Lock Fastons from the PCB, unlock connector **J3** and remove the PCBA from its holder.

DISASSEMBLY- AND RE-ASSEMBLY ADVISE

FC7070/01 /11 /61 /81

To exchange the PCBA in the Lower Stick assy, open the PCB Box and undo connectors **J3** (Main PCBA), **J4** (Clean Water sensor) and **J5** (DWT Hall sensor).

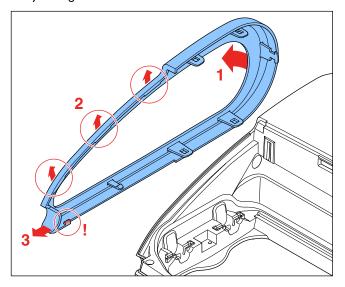

To exchange the Motor assy undo the fastons on the two black wires coming from the Motor assy going to the 4P male connector to the Upper Stick assy. Unscrew screw J holding the DWT Hall sensor in place, and unscrew the two screws I Holding the Motor assy in place. You are now able to carefully remove the Motor assy from the Lower Stick assy.

With the Motor assy removed you can also easily access the hinge construction holding the locking of the DWT handle in place. Both left and right hinge needs to be installed on the link before the hinge unit can be reinstalled in the appliance.

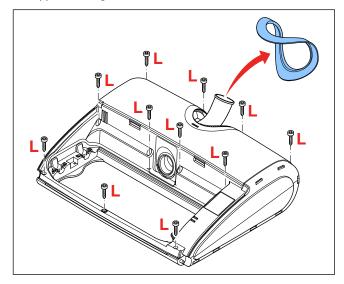

Nozzle

To be able to open the nozzle, first open the hood, take out the brush cover and remove the brushes. Clean the inside of the brush compartment if necessary.

Then carefully remove the side panels left and right from the nozzle, starting from the rear of the nozzle, along the top and bottom side of the nozzle, working to the front of the nozzle, ending at the hinge of the hood. Most connections are snaps, only the mating surface with the hood is a snap over construction, there the side panel needs to be lifter upwards a little bit to become undone. Only use a flathead screwdriver when absolutely necessary, because the plastic is easily damaged.

Carefully unsnap the collar from the nozzle. Next remove 11 screws L (2 are underneath the collar) to be able to remove the upper housing from the nozzle.

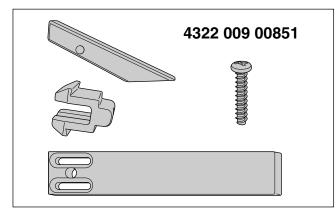

You can now easily access all components like the Nozzle PCBA, pump, suction tube, drive train etc.

When reassembling please take care that the different seals are placed back properly, keep in mind that especially the nozzle is a wet environment, and that all electronic leads are double isolated.

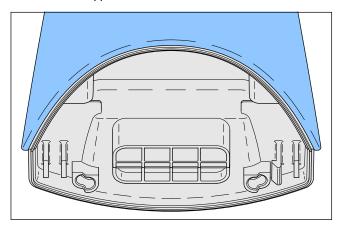

REAPAIR INSTRUCTIONS

FC7070/01 /11 /61 /81

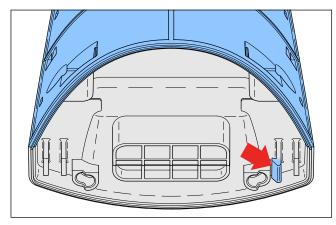

Instructions Stick connector Aquatrio

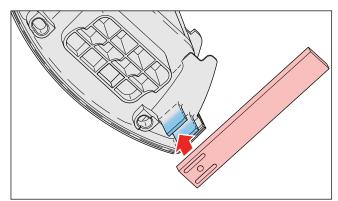

• Remove the upper cover.

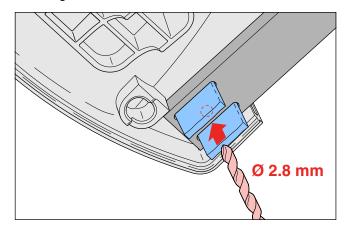

• Remove the housing front (and if needed the remaining click(s)).

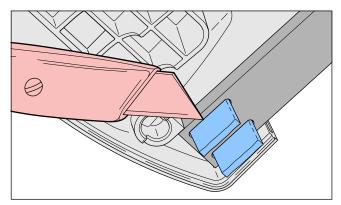

• Place the (drilling and) cutting plate. With the chamfers of the holes for the legs facing the housing rear.

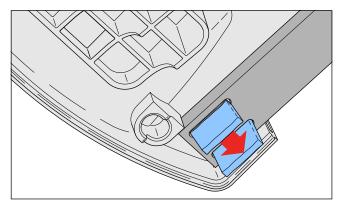

- Drill a Ø 2.8 mm hole, through the cutting plate, in the housing rear.

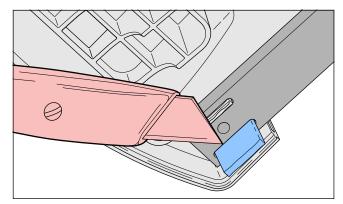

• Carve the first leg along the cutting plate.

· Break the first leg.

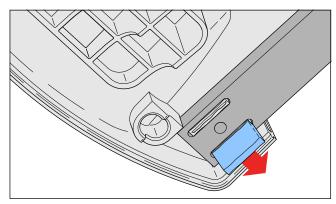

• Carve the second leg along the cutting plate.

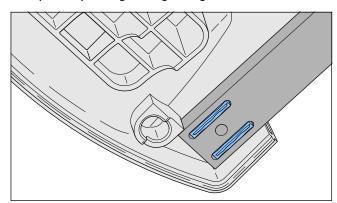

REAPAIR INSTRUCTIONS

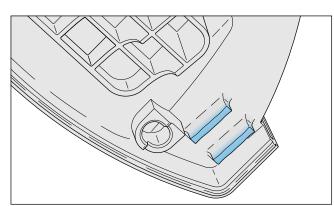

FC7070/01 /11 /61 /81

· Break the second leg.

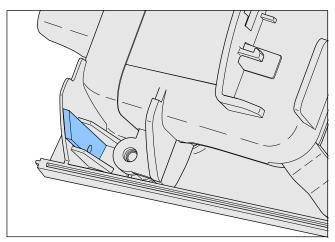

• Remove the second leg. Make sure the cutted surfaces of the legs is not sticking out the plate. If needed, adapt this by cutting or filing the legs.

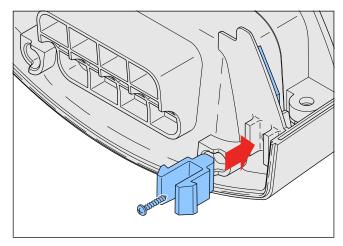

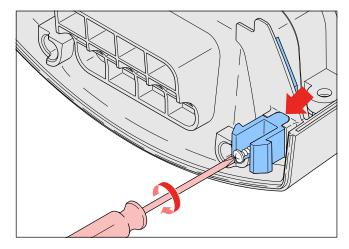

• Place the bolt plate.

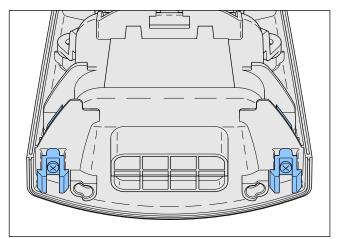

• Place the click finger 4, and the screw 2.8×16 head 5.8.

• Tighten the screw. Make sure the bottom of the click finger 4 touches the housing rear. If not, most likely the remaining leg(s) are still to long.

• Repair the other side.
