REPAIR INSTRUCTION

Replacement product

• Descaling

If the water system is nearly or less clogged by scale then operate the coffeemaker a few times with vinegar or with a 10-15% solution of either vinegar-acid, citric acid or tartar acid, into cold tap water. Do not use other de-scaling agents as these may harm the appliance. If this procedure does not restore the function, then switch off the coffeemaker when the acid has passed through during approximately 3 min. Keep the appliance in this condition overnight and continue/repeat the cleaning operation. After the de-scaling procedure, operate the coffeemaker twice with tap water.
