Coffeemaker Grind & Brew

HD7762

Philips Consumer Lifestyle

ceManual

PRODUCT INFORMATION

Safety

- This product meets the requirements regarding interference suppression on radio and TV.
- After the product has been repaired, it should function properly and has to meet the safety requirements as officially laid down at this moment.

TECHNICAL INFORMATION

 Voltage 	: 220-240V
Frequency	: 50 Hz
Power consumption	: 1000W
Color setting	: Black / Metal
Dimensions	
Appliance $H \times W \times D$: 440 x 210 x 310 mm
F-Box $L \times W \times H$: 320 x 280 x 505 mm
 Cord length 	: 0,8 m
• Filter size	: Ix4
Contents	
Jug (max.)	: 1320 mL
Water container (min.)	: 264 mL (2 cups)
Water container (max.)	: 1320 mL (10 cups)
Avg. water loss during bre	w process : 10%
 Materials 	
Appliance	: PP
Metal wrap	: Stainless steel
Jug	: Glass
Hoses	: Silicon
• Brew time (max.)	: 10 min
• Temperature (full jug)	· > 80 °C

- Temperature (full jug) : > 80 °C · Keep warm time
 - : 120 minutes

De-scaling

When the appliance indicates it needs to be descaled, operate the coffeemaker a few times with vinegar or with a 10-15% solution of either vinegar (acetic acid), citric acid or tartar acid, into cold tap water.

Use a paper filter to catch any particles coming out. Do not use other de-scaling agents as these may harm the appliance.

If this procedure does not restore the function, then switch off the coffeemaker when the acid is passing through. Keep the appliance in this condition overnight and continue/ repeat the cleaning operation.

After the de-scaling procedure, operate the coffeemaker twice with tap water in order to rinse any residual substances.

Schematics

TECHNICAL INFORMATION

Self-Check mode

The appliance is equipped with a self-check mode, this enables you to quickly check the function of the main components of the unit.

REPAIR INSTRUCTION

HD7762

Repair of this appliance should be carried out on part and or assembly level, most repairs can be allocated to a couple of main components:

• Bean container and duo-bean mechanics

Disassembly instructions until Step 1.

• User interface assy

Disassembly instructions until Step 4.

When in the UI panel itself has been disassembled, please make sure the wire and flat cable seal is properly installed. Upon reinstallation of the complete panel, please make sure the seal underneath the UI panel is put back.

Main PCBA

Disassembly instructions until Step 4.

When only the PCBA needs replacement, skip steps I - 3. Upon reinstallation of the PCBA, please make sure the PCBA holder slides back into its guiding recesses. Please note the position of the Grinder (DC-motor), and Synchro-motor (AC-motor) leads, when reversed the appliance will not start up.

• Grinder

Disassembly instructions until Step 6, skip step 3 and 5.

It is not advisable to disassemble the grinder, as this will disrupt the grinders' calibration. In production special tools are used to adjust the grind-fineness to the optimal level.

• Synchro motor + valve and seal

Disassembly instructions until Step 6, skip step 3 and 5.

When the valve and or seal have been removed, please make sure that the seal does not get damaged, and that the seal gets reinstalled correctly. The seal is critical to seal the grinder from steam coming from the coffee filter.

• Heater, bottom water supply

Disassembly instructions Step 4 and 5.

It is not advisable to disassemble the heater from the keep-warm plate. Heat-conductive paste should be applied to ensure optimal heat transfer from the element to the plate, jug and coffee.

• Top water supply

Disassembly instructions Step I and 2.

The Silicon hose between the elbow joint and the showerhead does not need to be removed to uninstall this component, when the hose does need replacement, make sure the hose clamps are put back properly, this is to prevent leakage. When the showerhead has been removed it should be cleaned from any residual liquid gasket and new liquid gasket (supplied in tubes of 45 g.) should be applied to ensure a proper seal.

• Complete Base, incl. metal wrap

Disassembly instructions Step 4 and 5.

The main PCBA and Heater assy need to be taken out completely, the base is screwed to the top by means of 6 screws.

DISASSEMBLY INSTRUCTIONS

HD7762

Remove all removable and detachable items like the Bean container lid, jug, filter holder and brush. The filter door can be removed for convenience by undoing both latches on the top and bottom side of the hinge.

Step I: Bean container removal

To remove the complete bean container, including Duo-Bean feature, remove the 4 screws (C) inside the bean container.

Step 2: Top cover removal

The top cover can be opened by removing the four screws (F) located underneath the Bean container and the four screws (G) accessible from the underside of the UI panel.

Please note the cable connecting to the Inspection window detection switch. The Water Level Indicator (WLI) cannot be removed without damaging the Top cover. When the top cover needs to be replaced the WLI can be reused, when the WLI needs to be replaced a new top cover needs to be ordered as well.

Step 3: UI panel removal

To be able to remove the UI panel, you need to disconnect the leads to the Synchro motor, and the flatcable to the main PCBA. The UI panel is held in place by two screws accessible from the top side of the appliance, and 5 clicks accessible from the bottom side of the UI panel. Unscrew both screws (J).

Undo the snaps by tracing the curve of the UI panel with a flat-head screwdriver, while pulling the UI panel upwards.

The UI panel can be disassembled, the rotary knob can simply be pulled off, the rotary encoder is secured by a single nut, remove the nut. The PCBA cover is held in place by six screws (L), once unscrewed the PCBA can be taken out. Please mind the rubber seal, preventing steam from reaching the UI PCBA.

DISASSEMBLY INSTRUCTIONS

HD7762

Step 4: Bottom cover & Main PCBA

To be able to replace the components in the top side of the appliance (like the Grinder and Synchro motor), their leads need to be disconnected from the main PCBA. To reach the main PCBA, remove the six screws (**P**) in the bottom cover, four of them are located underneath the rubber feet.

The PCBA is in the plastic box indicated in blue, some leads need to be released before you can take out the PCBA completely.

Step 5: Heater assy

To replace the heater assy disconnect the leads from the main PCBA and the Silicon hoses from the pinions on the heater. Only the four screws (**O**) indicated below hold the heater assy (incl. keep warm plate) in place. The top silicon hose is the cold water intake, the bottom silicon hose is the hot water output. It connects to the top water supply.

Step 6: Grinder, Synchro motor and Water supply To remove the Grinder, disconnect its leads from the main PCBA and undo screws (U). To remove the Synchro motor remove its leads from the main PCBA and undo screws (♥). The top water supply, consisting of the shower head, silicon hose, elbow and riser pipe, can be removed by undoing screws (\$), only when the Silicon hose needs

REASSEMBLY INSTRUCTIONS

HD7762

Basically the reassembly needs to take place tracing the steps needed to disassemble the appliance. There are some critical attention points:

All the gaskets in the appliance must be reinstalled properly

Gasket on top of the grinder

Gasket under the UI panel

Gasket of the UI panel

Gasket for the wires entering the UI panel

Gasket for the valve / Synchro motor

Gasket for the steam vent

Gasket for the steam base

REASSEMBLY INSTRUCTIONS

All the liquid seals, when broken, need to be replaced. This includes cleaning the mating surfaces and applying sufficient new liquid sealing.

Gasket of the Shower head

When the UI panel or Synchro motor has been removed, special attention is needed to the proper wire routing from top to bottom. All wires must pass through the slots as indicated in red in the cross section below. They may not be passed through the opening for the Grinder.

Bottom Cover

Upon reinstallation of the bottom cover, please mind that the notch on the PCBA holder fits into the recess of the bottom cover.
